

THERMAL BINDING WITH DROP&GO TECHNOLOGY

# Bindomatic® 7000 System

*Binds up to 20 documents per minute*

## 7000 SYSTEM DETAILS

### THE NEXT GENERATION OF HIGHLY EFFICIENT DOCUMENT BINDING MACHINES.

Bindomatic's Drop&Go Technology makes the new Bindomatic® 7000 System 16x faster than punch and bind and 12x faster than tape binding. Its efficiency — superseded only by the new Bindomatic® 9000 — binds documents at an impressive rate of 20 documents per minute.

Built on the stability and technology of the 101DFS, which launched in 2003, the 7000 System is the ideal binding solution for office/corporate walk-up print stations, as well as volume demanding CRD or commercial print environments.

The 7000 System features additional upgrades including increased quality and strength of the bound documents as well as improved appearance of the machine.

The 7000 delivers professionally-bound documents, without the need of trained operators.

#### DOCUMENT SIZE

A4 — portrait bound orientation

#### DOCUMENT SPINE WIDTH

from 1.5 to 15 mm

#### SYSTEM CAPACITY

From 1 to 150 sheets of 80 gsm paper.

#### MACHINE DIMENSIONS

L 511 x W 475 x H 360mm

#### MACHINE WEIGHT

28 kg

Load 20 documents per minute (depending on spine width)

#### POWER SUPPLY

230V, 50/60Hz

**BONUS!** Includes additional desktop unit for editing and binding documents that are thicker than 15mm

THE BINDOMATIC® 7000 IS AVAILABLE FOR LEASE.

## A. BACK AND RIGHT SIDE

Once sheets are placed in the automatic cover size selector, the machine will display the correct cover spine width to use.

*Recommended height of table for binder is 500mm*

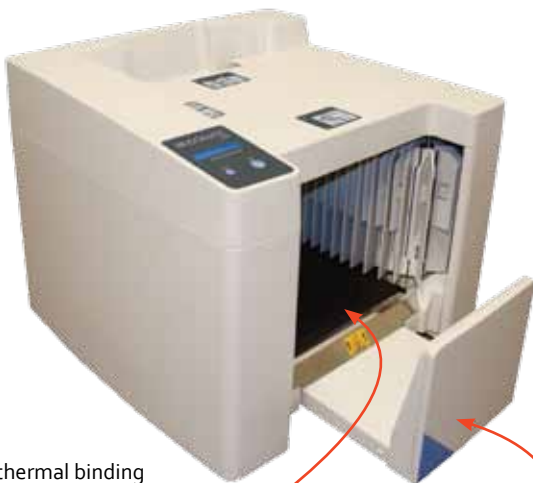

## B. OVERHEAD

Insert unbound documents (up to 150 sheets) and covers into the 7000

Step-by-step, easy to follow instructions are on every Bindomatic® 7000.

## C. FRONT AND LEFT SIDE

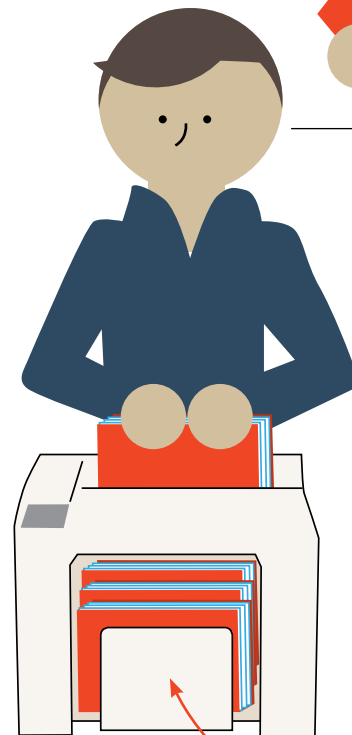

The thermal binding belt fuses your document sheets and covers together in seconds, then moves the finished documents to the cooling tray.

The cooling tray expands to accommodate your documents as they emerge; bound and ready to use.

1. Insert the set of papers to be bound in the automatic cover size selector. The display will show the correct cover spine width to use.

2. Place document sheets in a Bindomatic cover, with the correct spine width, and align.

3. **DROP** the ready-to-bind document when the green LED indicator light is lit. Depending on spine width, as many as 20 documents per minute can be inserted.

4. **GO!** The machine will signal when the thermal binding process is complete — approximately 2 minutes. Remove the bound document(s) from the cooling tray.
