SGM-100

Barcode Scanner / Currency Counter

● Barcode Scanner with Image Processing Technology

SGM-100 uses advanced image processing technology, so SGM-100 can scan barcode more accurately and clearly.
SGM-100 has 4 types of discrimination mode as following.
- Mixed mode : identifies mixed denomination bills quickly and provides total value and piece count
- Single mode : counts a specific denomination and classifies all others to the reject pocket
- Separation mode : recognizes the first banknote and separates different denominations to the reject pocket
- Direction mode : processes all the notes "faced and oriented" and rejects all others

● Excellent Counterfeit Detection

SGM-100 carries high levels of counterfeit detection with UV, FL, IR and Superior Magnetic Detection system. Most suspect notes will not escape this advanced detection technology.

● Excellent Counterfeit Detection

Easy-to-read LCD display shows variety information at the same time and provides convenient graphic user interfaces.

● Non-stop Throughout

SGM-100's feed mechanism ensures non-stop throughtout for variety of functions.
- identifies mixed denomination bills quickly and provides total value and piece count.
- counts a specific denomination and classifies all others to the reject pocket.
- recognizes the first banknote and separates different denominations to the reject pocket.
